- Properly handled, transported, and disposed of recycled, trashed, and compostable materials.
- Helped cover other departments when extra help was needed.

## HOBBIES

Coding:  
After high school, I became more interested in computers and coding. I like to work on personal coding projects when I have time. I am proficient in Java but also have experience in Python. I have also taken the following courses in my college for my degree:

- Web and internet programming: Taught me HTML, PHP, MYSQL, CSS, and Javascript.
- Data structures: Taught me concepts of data structures and C++.

Bowling:  
I've been bowling since I was 10 years old and I still am to this day. I was in a junior league for 8 years. It was always fun and getting better at the sport became a goal of mine. I like going to the bowling club at my college every now then.

Board Games:  
I love playing board games with my family and friends. I liked them so much I was the president of my high school board game club and am currently secretary of college's club. The games were good at challenging myself in strategy while also having fun. I was also always the one to read the rules. While this wasn't always fun, I noticed that doing this has benefited me with skills of explaining complex things and I have gotten better at explaining these rules over time.
